

To whom it may concern:

Following is my resume for your review. I am a highly trained web developer with a background in project architecture and a history of working closely with clients to achieve optimal results. My objective as a web developer is to develop creative, technologically advanced designs with strong emphasis on usability, responsiveness and user experience.

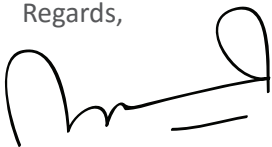

A desire to help clients achieve their technological goals led me to specialize in web development skills with UX/UI Design, Front-End Development, .Net and PHP. While my on-the-job experience has afforded me a well-rounded skill set, including strong collaboration and problem solving skills, I excel in the following areas:

- Designing SEO-driven responsive websites that exceed client expectations
- Evaluating solution alternatives for complex technical requirements
- Managing team of developers and designers to optimize workflow

I am extremely enthusiastic about development technologies and would love the opportunity to contribute to your success in this area.

I am certain you will find my qualifications meet the criteria sufficiently as a prime candidate for the position available. Your consideration is urged, and I anticipate speaking with you in order to further discuss a possible interview, and/or future employment with your company.

Regards,

Naveed Ahmed
