

Naveed Ahmed - Work Summary

Axproz - August 2009 to April 2014

Position & Job Description:

- Joined as a front-end developer. Creating website mockups for clients and inhouse projects.
- Got promoted to Lead Developer within a year, leading the team of 5 developer responsible for inhouse writing portal development and few overseas client websites.
- Promoted to Associate Manager in 2012, responsibilities included managing time and work for team of 15 developer/designers with help of 2 lead developers; coordinate with content department, sales department & client. reports directly to director.
- During my tenure I was rewarded multiple time as the *employe of the month* and twice with *employe of the year* award.

Projects:

- **Contentproz** (<http://www.contentproz.net>)
Started as a simple content writing website, this project become largest project for axproz leading to multiple other projects and marked itself as base revenue generating project.

Since the start I was given responsibility for all the design aspect of this website. Later as a lead developer, on the requirements of more services I design and develop user-area and more features using .Net (C#) :

- User-area (*Login, signup, password management, automated emails, profiles creation*)
- Payment/Order process (*Ordering process, service management, payment gateway integration*)

I also created the backend service/production panel:

- Writer management(Writer signup, points management, rate management, automated work assignment, review system)
- Work management (Manage assigned work, assign/re-assign option, review area for quality management, order-status management)
- Service management (service management area to manage the active services, set prices for client sites,)
- Service (Web service to remotely add order from micro sites)

- **24Activ**

With growth of business axproz required and email management system that can handle multiple micro website, email can be assigned to one department to another, and a monitoring system to check response time, delayed responses reports etc.

Uses OSTicket system and modified it to the core to fulfill these requirement:

- Giving ability to jump to the user-management area direct from the console
- Limiting only managers to view email and contact of the clients
- Automatic response regarding client order status
- Custom signature and template for each micro site
- Change user to user tickets view to department to department
- A report and alert system to monitor response time, active open tickets etc.

Also included chat service (modified installation of Livezilla) and integrated viop phone service from phone.com to this panel.

- **Contentproz Client Projects**

During my tenure at Axproz I have worked on numerous client project, leading a team of dedicated developer/designer for client web/print media projects coming through contentproz and other micro website.

- Wordpress projects
- Payment-gateway integration
- Static website

Symits Solutions - June 2014 to Sept 2015

Outsource resource under the parent company SABASEO, USA.

Position & Job Description:

- Joined as a senior developer. Working on PHP based project highly collaborative, agile environment.
- Responsibilities including but not limited to code optimization, contribute towards product design specification improvement.
